

F227 G

(GRANULAR IRON OXY-SULFATE)*

SPECIFICATIONS

Guaranteed Analysis: Iron, weight..... 40%

Bulk Density, lbs. per cubic foot 93 - 99

Particle Size 90%
(1.5 x 3.5 mm)

Physical Appearance Brown Granule

SHIPPING CONTAINERS Bulk, 25 Kg Bags, or
1,000 Kg bags

PLANT LOCATIONS Walnut Ridge, AR

AGRONOMIC CONSIDERATION

F227 G is a high analysis granular product used for short-term correction of poor plant uptake of soil iron. An acidic granule for solubilized iron is rapidly changed to insoluble phosphates, carbonates and bicarbonates. Prevention of deficiency in the plant is a better practice than trying to correct chlorosis once it appears.

MANUFACTURING CONSIDERATIONS

Normal bulk blending procedures. Note: Will “set-up” in storage or in final product.

WARNING

This product will stain sidewalks and pools. It must be swept off before moisture reaches product.
