F-227 G
(GRANULAR IRON OXY-SULFATE)*

SPECIFICATIONS

Guaranteed Analysis: Iron, weight % 40
Bulk Density, lbs. per cubic foot 93 – 99
Particle Size 90% 1.5 mm x 3.5 mm
SGN 185 – 200

Physical Appearance **Brown Granules**

SHIPPING CONTAINERS.....**Bulk, 25 Kg Bags,**
1,000 kg bags

PLANT LOCATIONS.....**Walnut Ridge, AR**

AGRONOMIC CONSIDERATION-- F 227 G is a high analysis granular product used for short-term correction of poor plant uptake of soil iron. An acidic granule for reducing in-season tie-up of iron. Especially effective on high pH soils where solubilized iron is rapidly changed to insoluble phosphates, carbonates and bicarbonates. Prevention of deficiency in the plant is a better practice than trying to correct chlorosis once it appears.

GENERAL RECOMMENDATIONS-- Broadcast apply 0.5 to 10 pounds iron per acre on turf and sod crops; apply as a side-band for row crops at planting. Apply with nitrogen or sulfur if possible.

MANUFACTURING CONSIDERATIONS-- Normal bulk blending procedures. Will note "set-up" in storage or in final product.

***WARNING: This product will stain sidewalks and pools.**
It must be swept off before moisture reaches product.
