F 425 G

(GRANULAR 25% ZINC OXY-SULFATE- 10% Water Soluble Zinc)

SPECIFICATIONS

Analysis: Zinc, weight % 25.00%
 Bulk Density, lbs. per cubic foot..... 90-95
 Particle Size..... 90% -6 + 16 Mesh
 Physical Appearance..... Grayish Brown

SHIPPING CONTAINERS..... Bulk, 25kg bags

PLANT LOCATIONS..... Walnut Ridge, AR
 Norfolk, NE

AGRONOMIC CONSIDERATIONS--Low analysis of zinc for excellent field distribution which enhances nutrient uptake at low application rates. Partly acidulated for ready availability with the remaining zinc in divided oxide form for building soil zinc reserves. Lowest cost form of zinc.

GENERAL RECOMMENDATIONS--Use soil tests as a guide for zinc application rates. Typical use rates would be 10-25 pounds per acre in a bulk blend for broadcasting or 5-15 pounds per acre in a prepared blend for side-banding at planting. 10% water soluble Zinc.

MANUFACTURING CONSIDERATIONS--Normal bulk blending procedures.
